

PACIFIC HYDROBLASTING

ENVIRONMENTAL CLEANING SERVICES

27475 Ynez Rd, Suite 117, Temecula, CA 92591-4612

Hydro Engineering's ISO certification was the key decision factor for us buying our pressure washing units from them. In an industry that has yet to broadly establish acceptable operating and business practices, HE is leading the way by initiating standards in equipment manufacturing. The hydro blaster is UL 1776 certified for the USA, CSA certified for Canada, and CE certified for the European Union - a commonly recognized standard in many countries. This means greater reliability & safety in our operations, and less liability for our customers and ourselves.

We've been using Hydro Engineering's pressure washing system for three years now, and their structural craftsmanship has even exceeded the limits of the engine's hour meter, while the engine continues to perform at least 6 days a week. From an operations standpoint, it's been the best investment bar none, so much so that we requested the same design on our newest trailer.

HE's technical support team has always been available during our times of need, whether its overnighting parts, or diagnosing problems & fixes over the phone, and that can make (or break) a small business' operations and profitability.

Our company has grown over 300% during the last three years, despite the stubborn U.S. recession, and we attribute much of our success to the support of a dedicated equipment manufacturer we found in Hydro Engineering.

Sincerely,

Glen Probasco, President
Pacific Hydroblasting Inc.
